

Impact of the 2020 NBA Bubble on Playoff Team Performance.

<https://youtu.be/puP1JJHxD-8>

Analyzing how the 2020 NBA bubble environment impacted playoff team performance compared to 2019.

Data Sources & Tools:

- Data: (e.g., "Basketball Reference 2019 & 2020 Playoffs, NBA API")
- Analysis: Python (Pandas, Requests, BeautifulSoup, Matplotlib)

- Insight 1: "Teams shot 2% higher FG% in the 2020 bubble playoffs, suggesting the controlled environment improved shooting efficiency."
- Insight 2: "Turnovers increased slightly in 2020, indicating that while shooting improved, ball-handling faced new pressures."
- Insight 3: "A moderate rise in 3-point accuracy suggests teams adapted their strategy to rely more on perimeter shooting."
